Solution 1: Market Fluctuation

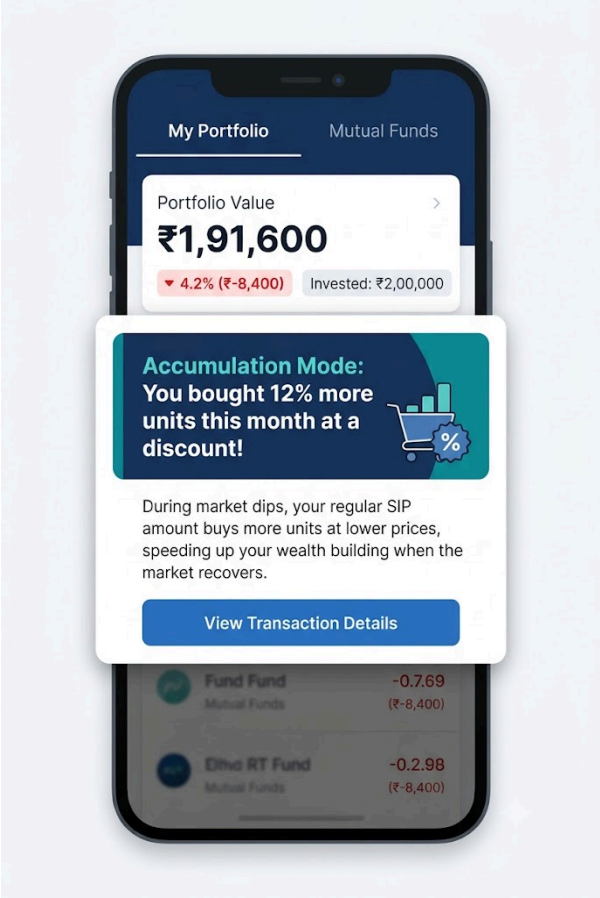

Solution 4: The "Historical Resilience" Portfolio Toggle This design features a simple toggle switch that lets users flip their view from "Today's Loss" to a "Historical Stress Test." It simulates how their specific funds performed and recovered during major historical corrections, converting abstract losses into historical proof of resilience.

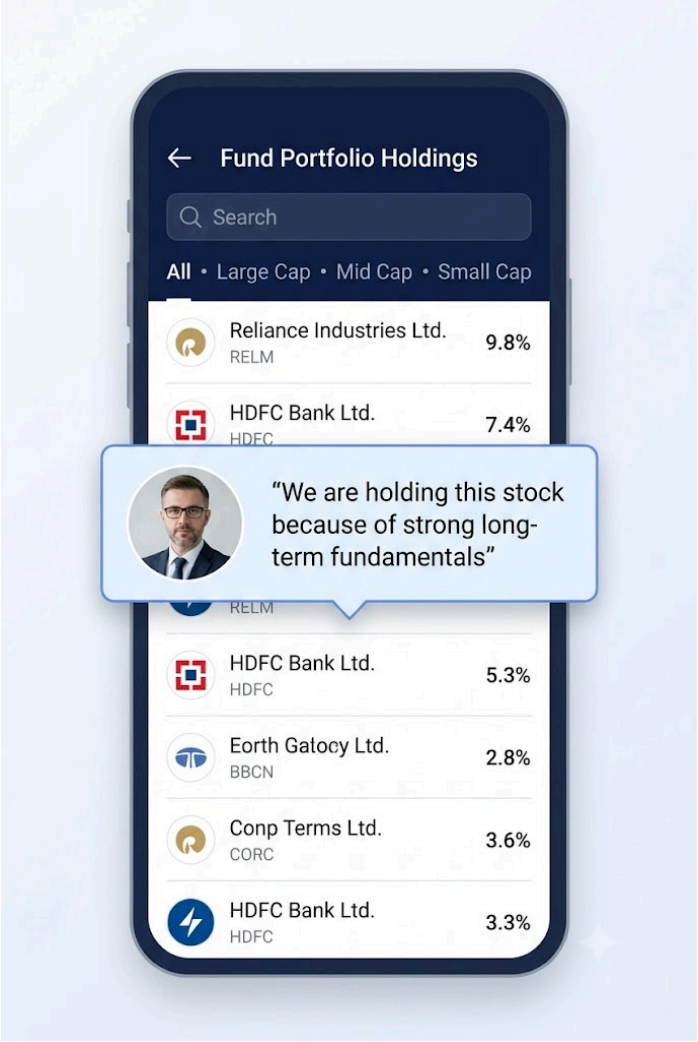

Solution 1: "Accumulation Mode" Unit TrackerCore

Core Concept: When the market drops, the UI shifts focus away from the overall portfolio loss. Instead, it highlights exactly how many *extra* units the user's recent SIP installment purchased compared to last month because the NAV was lower, framing it as a "discount shopping" event.
Problem-Solution Fit: This directly addresses the panic seen in new investors by actively demonstrating the core mathematical benefit of an SIP (Rupee Cost Averaging). It turns a negative emotional event (market drop) into a positive behavioral reinforcement.
Differentiation & Defensibility: Most brokerages only show total portfolio value and XIRR. Shifting the psychological anchor to "units accumulated" is a behavioral design moat that keeps users engaged during bear markets without giving direct financial advice.

Solution 2: The "Manager's Playbook" Overlay

Core Concept: Directly addressing Pratik and Raj's feedback, this feature allows users to click on specific underperforming stocks within their mutual fund's holding list to see a short, pre-approved rationale from the fund manager on why they are continuing to hold it despite the dip.
Problem-Solution Fit: Users explicitly stated they want to know the *why* behind their investments to build trust. By showing that an expert is deliberately holding a stock for fundamental reasons, it removes the user's urge to panic-sell.
Differentiation & Defensibility: Extremely high defensibility. It requires establishing exclusive data and content pipelines directly with Asset Management Companies (AMCs) to source and approve these micro-rationales, which smaller competitors cannot easily replicate.

Groww | Solution 4

Volatility History

Help investors see how their mutual fund has behaved during past market downturns and recoveries, so current dips feel less alarming.

Focus: Build confidence for first-time SIP investors by showing real historical context of the fund during market ups and downs.

1 See your investments
View your portfolio and select a mutual fund.

2 Go to Volatility History
Open the fund and tap on "Volatility History".

3 See key volatility insights
Get a quick view of the fund's biggest dip, recovery time, and post-recovery performance.

4 Explore past downturns
Check how the fund performed during past market declines, including recovery time.

5 Understand the takeaway
See a clear summary and a simple insight to build a long-term perspective.

Outcome

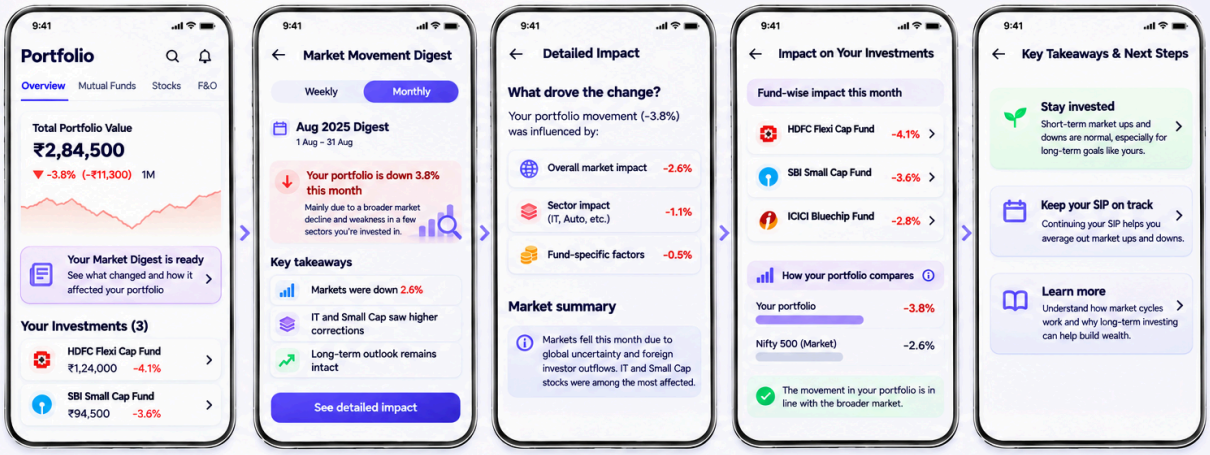

- Builds confidence during market dips
- Sets the right historical context
- Encourages a long-term view
- Improves chances of SIP continuation for 12 months

Groww | Solution 5

Market Movement Digest

A personalised, easy-to-understand market summary that explains key market movements and their impact on your portfolio, so you stay informed without the noise.

Focus: Reduce confusion and information overload for first-time SIP investors by giving a simple, periodic (weekly/monthly) market summary relevant to their portfolio.

1 Discover the digest
See a contextual prompt on your portfolio when a new market summary is available.

2 Get a quick summary
View a simple, personalised summary of market movements and their impact on your portfolio.

3 Understand the reasons
See a clear breakdown of what drove the change (market, sector, and fund-level impact).

4 See your fund impact
Check how each of your mutual funds performed and how it compares with the broader market.

5 Take informed action
Get clear takeaways and next steps to stay confident and invested for the long term.

Outcome

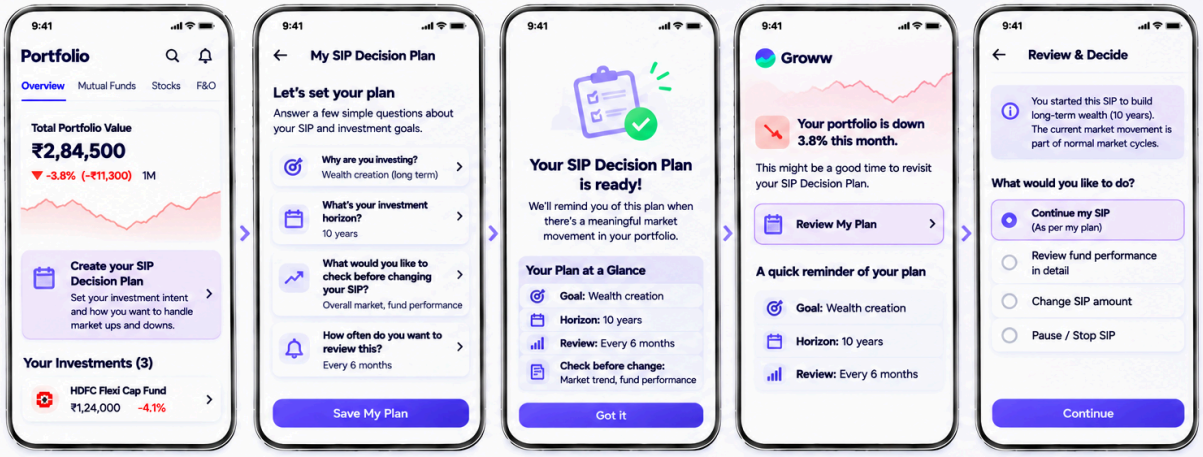

- Reduces confusion during market volatility
- Provides relevant, personalised insights
- Builds long-term investing perspective
- Increases chances of SIP continuation for 12 months

Groww | Solution 8

My SIP Decision Plan

Let investors set their own plan and reasons for investing, so they can revisit it during market volatility and make a more informed, less emotional decision.

Focus: Help investors stay committed by reminding them of their own investment intent and plan when markets are volatile.

1 Discover the feature
See a prompt to create your SIP Decision Plan on the portfolio.

2 Set your plan
Capture your investment intent, horizon, what to check before changing, and review frequency.

3 Plan is saved
Get a quick summary of your plan and how it will be used.

4 Get a timely reminder
When there's a meaningful market drop, Groww nudges you to revisit your plan.

5 Review and decide
See your original intent and choose your next step confidently.

Outcome

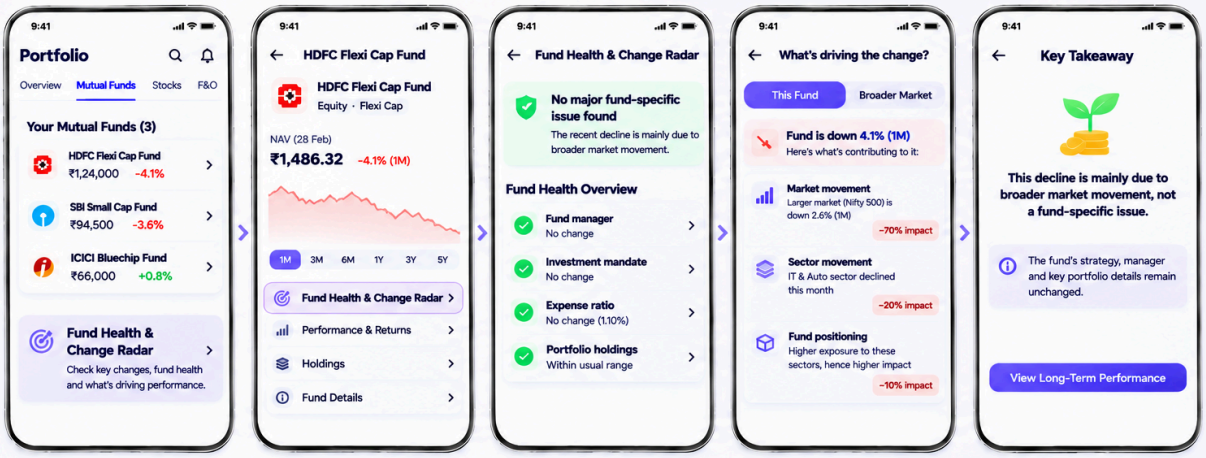

- Reduces impulsive decisions
- Reinforces long-term investment intent
- Builds a disciplined investing habit
- Increases investor confidence during volatility
- Improves chances of SIP continuation for 12 months

Groww | Solution 9

Fund Health & Change Radar

Help investors understand whether a fund's recent performance is due to normal market movements or a meaningful change in the fund itself.

Focus: Separate market volatility from fund-specific changes, so investors can make more informed decisions.

1. **Select a fund**
   Go to your Mutual Fund portfolio and choose a fund you want to understand.
2. **Open the radar**
   Tap on "Fund Health & Change Radar" from the fund detail page.
3. **Check fund health**
   See key fund-level updates like manager, mandate, expense ratio and portfolio changes.
4. **Understand the reason**
   Get a clear split of what's driving the fund's performance (market, sector and fund positioning).
5. **Take a decision**
   See a simple, actionable takeaway to stay informed and confident.

Outcome

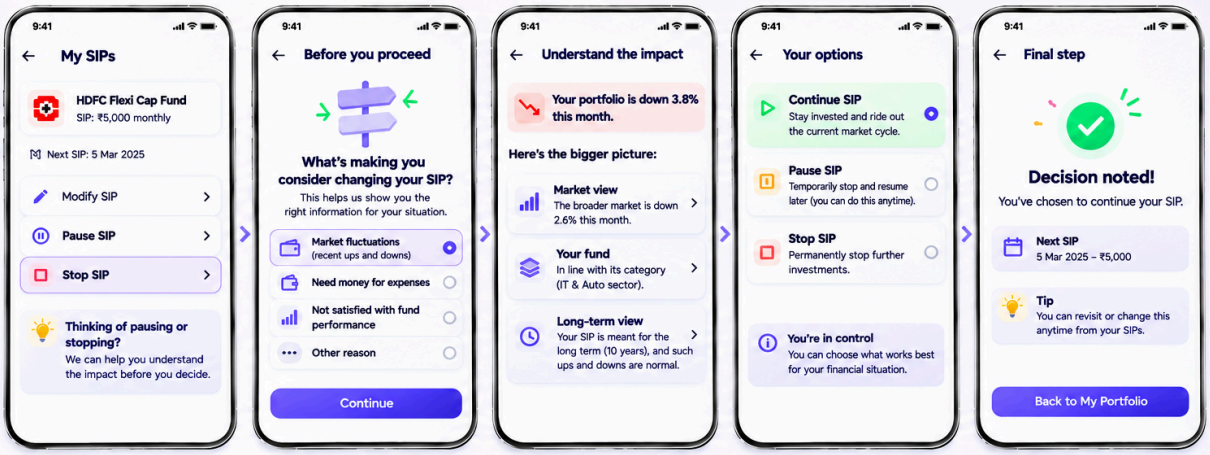

- Clarity on fund performance
- Distinguish market vs fund-specific issues
- Reduce unnecessary concern and confusion
- Build trust in the investment
- Improve chances of SIP continuation for 12 months

Groww | Solution 10

SIP Pause Decision Assistant

Support investors at the exact moment they consider pausing or stopping their SIP by understanding the reason and giving relevant, simple information to make a confident decision.

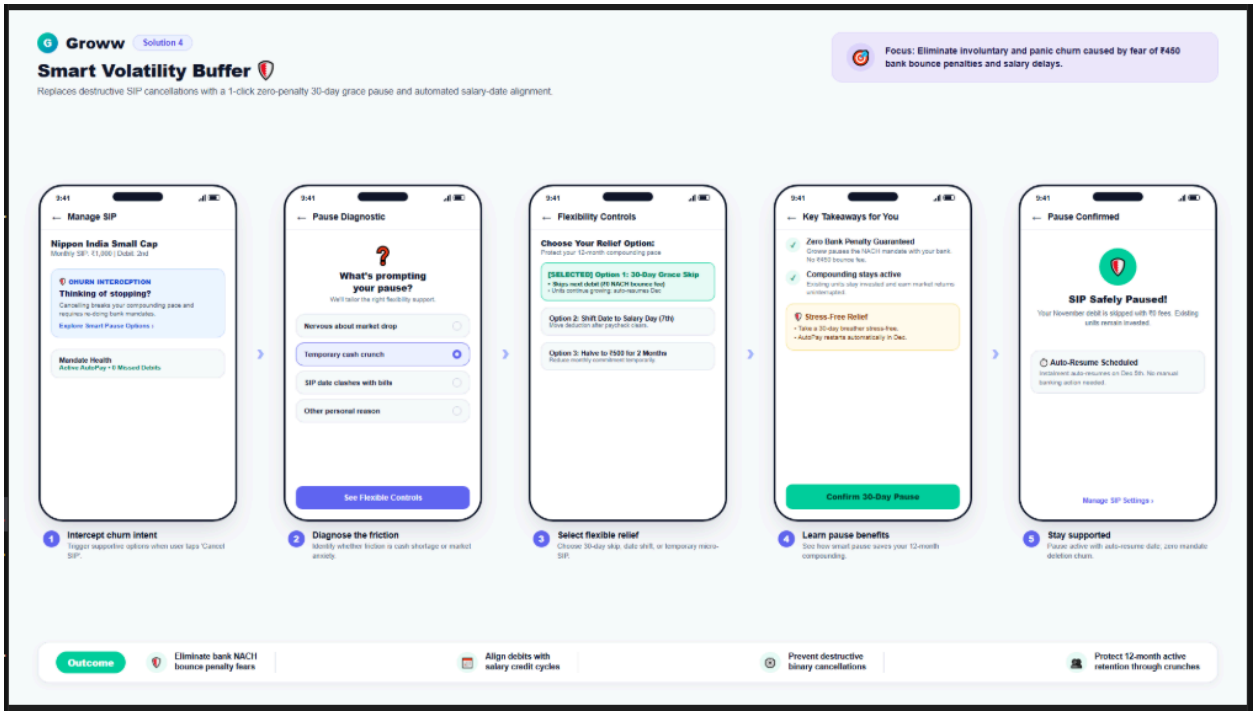

Focus: Reduce avoidable SIP interruptions by addressing the real reason behind the decision and providing relevant support.

1. **Start from SIP management**
   Investor selects Pause or Stop SIP.
2. **Share the reason**
   Capture a simple reason for considering the change.
3. **Understand the context**
   Get a clear, personalised explanation (market, fund and long-term view).
4. **See relevant options**
   Explore options (continue, pause or stop) with the right information for each.
5. **Make a confident decision**
   Choose what's best, with the flexibility to revisit later.

Outcome

- Reduce avoidable SIP stops
- Help investors make informed decisions
- Build trust and long-term confidence
- Address the right concern at the right time
- Improve 12-month SIP retention
